### Abstract

*Education to all is both prerequisite and pivotal for the development . The development is endangered if education of the country is engendered. Owing to reasons like low income, household chores, vicinity of school, separate sanitation facility girl child is vulnerable to ending up as a school dropouts. The present study has been initiated to map the stark disparity in girls education and high drop outs from school . The study penetrate to sub districts level of state of Gujarat as though the state has acquired overwhelming growth it could not resist the non-discriminatory gender education. The study has been divided into zone for both district and sub district level. The data source for the study is the District statistical outlines 2021. Among districts of Gujarat the highest girls drop out while transition from primary to high school is reported at Chota-Udaipur of 82.91% and among sub districts (talukas) the highest girls drop out of 94.72 is reported at Gandhevi of Navsari districts .*

### Prologue

India's struggle for gender parity is longer than Swaraj. Girls drop out from school is a worrisome scenario in India. While SDGs (Goal 4) emphasize on quality education to all meaning an education that aims at transformation and not for information, India is still grappling with the challenge of gender disparity in education. How would the country in such state

accomplish the SDG ? Across Indian states girls drop out in high schools is phenomenal than boys. On an average 14.6 percent of girls drop out from school before reaching high school in India. Furthermore, Gujarat has been among worst performing state with 23.3% of girls dropping off from school in transition from upper primary to high school. (Project approval board, Ministry of Education). The state records stark gender disparity in education with about 97.3% enrolled at the primary level but only 29.2% continue with schooling by the time they reach the high school. While 96.4% male students enrolled in schools at the primary level and 45% continue to study in high school level. Varied reasons have been reported in this regard some most significant are household chores, vicinity of school, separate sanitation facility low income and hence to finance both daughter and son education is impossible and early marriages. Owing to this alarming signals the present study is undertaken to penetrate at sub district (talukas) and understand the status of girls drop out rates. The study has been divided into the four zone viz. North Gujarat, South Gujarat, Central Gujarat and Saurashtra for the sake of convenience in analysis. The sub-districts too are examined zone wise for ameliorating the understanding about the status of girls drop out from education in hinterlands of Gujarat. The data sources of the study is Districts statistical outlines. The study covers 33 districts and 285 talukas (252 talukas, 33 head quarters). The data for both boys and girls is reported for understanding disparity in girls education scenario and status at district and sub district levels of the state.

**Key words :**

drop out, transition, primary school, high school

**Objectives :**

1. To compare girls enrollment vis a vis boys at primary school level and high school level.
2. To examine girls drop out rate in the districts of Gujarat.

3. To examine girls drop out rate in the sub districts of Gujarat.

### **Girls enrollment as a ratio of boys at Primary and High school level.**

Gujarat, among states of India records low girls enrollment than its male counter-part at both primary school and high school. Moreover, in few districts of Gujarat the enrollment is considerably low while in few tribal districts the enrollments of girls at both primary and high school level is higher than boys. Additionally in districts of Saurashtra zone the girls enrollment show substantial decline at high school level. It is observed that in Gujarat between 11 to 13 years of age 85.9% girls drop and other 57.3% drop between 14 to 15 years of age leaving only 29.2% girls in continuing with higher studies. It is imperative to examine zone wise enrollments of girls as ratio of boys at primary and high school level ( Refer Table 1, Annexure) . While girls enrollment on an average is 90% at primary level (that is 90% of girls are enrolled in primary school as against 100% boys ) it falls to 75% at high school level when a female student is approximately 13 to 14 years of age. Among district of Gujarat Banaskantha records lowest girls enrollment (63%) in high school- meaning against 100 boys in the school only 63 girls are enrolled. Whilst highest girls enrollment is at Dang of 102.25 that is against 100 boys 102 girls are enrolled meaning there are more girls in high school than boys in Dang. The trend is also due to tribal dominated districts. The tribes promotes girls education and do not discriminate while such disparity is stark in talukas of Saurashtra districts. In these districts when a girl attend teenage they are forced to learn household chores and hence drop from school. Unless this deep rooted societal belief is insulated eliminating disparity is far fetched.

## Girls drop out in the districts of Gujarat

The girl child is vulnerable to ending up as a school dropout due to either social reasons or patriarchy. This clearly reflects gender divide with more girls dropping out of school while they enter high schools in the districts of Gujarat. For the sake of convenience and better analysis the districts in the present study has been divided into four zones. The highest drop out is recorded at Chotta Udaipur district of Central Gujarat where 82.91% of girls drop out before they enter high school meaning only 17.1% girls continue with their education. While zone wise average drop out is highest at South Gujarat district, Saurashtra zone records higher gap in drop out between girls and boys meaning more girls discontinue with education as they reach puberty and parents with low income groups promote boys to pursue higher education while daughters join mothers in household chores. Also these districts have been characterized with rituals of early marriages resulting into girls dropping out from formal education. It is imperative to analyze each zone in depth for understanding status of girls drop out. Central zone records average girls drop out of 69.19 against 65.75 boys drop out with Chota Udaipur falls in this zone and has highest drop out while Mahisagar is with lowest girls drop out rate in the zone of 60.53.(Refer Table 2, Annexure) Turning the focus on South zone where there are seven districts the zone average for girls drop out is recorded as 67 against 62 for boys. The Valsad district records highest girls drop out of 77.80 while they enter high school and lowest is recorded at Navsari of 37.21 which is second lowest among all the talukas of Gujarat (Refer Table 2, Annexure). North zone having six districts has average girls drop out of 66.66 against 63.75 for boys and Aravalli taluka has lowest girls drop out of 55.62 while highest in the zone is at Banaskanth of 76.77 girls do not enter high school meaning only 22.38% girls continue with high school education in this district (Refer Table 2, Annexure). The Saurashtra zone with twelve talukas and is the largest zone of

the Gujarat has average girls drop out of 60.48 against 53.87 of boys indicates discriminatory attitude for the girl child. The Gir somnath district records highest drop out girls while they enter high school of 76.97 meaning only 23.03% of girls enter high school in this district while least drop out is at Rajkot (-7.42)<sup>1</sup>. Across zone and in all the districts except Rajkot girls vulnerability to end education while entering high school is higher than boys due to various social , economical or cultural reasons . Unless revolutionary changes in our social, economical and cultural platforms are infused non-discriminatory and effective education will be resisted. Moreover, some special education system where emphasis is more on substance than symbolism is inevitable to protect dwindling applicability of knowledge. A simple solution to this could be traced in Gandhian educational methods or new education policy 2020.

### **Girls drop out in the Sub districts (talukas) of Gujarat**

In order to understand the status of girls drop out from school in Gujarat it is imperative to penetrate into sub districts of Gujarat. The present study covers all 285 sub districts (talukas and cities) of Gujarat and data for girls drop out from school while in transition from primary to high school is culled from District statistical outlines . The zone wise listing of sub districts of Gujarat in Table 3.1 to 3.4 of Annexure is to facilitate understanding. Fine focusing Central zone of Gujarat that has 72 sub districts. The Deskroi in Ahmedabad district records least girl drop out of 36.2 while highest girls drop out is recorded at Kavath in Chota Udaipur of 89.01. In Central zone Deskroi, Jambugoda, Lunavada and Balasinor talukas reports less than 50 percent girls drop out rate from school rest all other talukas have girls drop out rate above 50 percent indicating that only 50 percent girls continue with education when they enter high school other all leave

---

<sup>1</sup> Negative figure indicates more girls in high school than in Primary, this is due to migration of girls to Rajkot from other districts for education.

formal education (Refer Table 3.1 Annexure) . In South zone 47 talukas reports more than 50% girls drop out and only 6 talukas have less than 50 % girls drop out rate. The Khergav reports lowest girls drop out from school of 12.57 percent while highest girls drop out in the zone is at Gandevi of 94.2 meaning only 5.8% of girls continue their school after primary level. (Refer Table 3.2, Annexure) In North Gujarat zone lies 57 talukas of which 56 talukas records more than 50% girls drop out, only Bayad records 14.48% drop out rate of girls and the least in the district. The Ameergadh records 90.80% drop out of girls meaning only 9.2% girls in this taluka continue with high school. Nine talukas of this zone records more than 80% girls dropout and 24 talukas records more than 70% drop out which certainly is the state of dreadful gender discrimination. (Refer Table 3.3, Annexure) . The Saurashtra zone – the largest zone of the state in terms of number of talukas. The zone has 101 talukas, of which 91 talukas have reported more than 50%, girls drop out from school while they enter the high school 7 have reported 40% drop out while 3 – Rajkot, Rajkot city and Bhavnagar reports less than 40% drop out . In fact Rajkot and Rajkot city reports negative girls drop out rate due to migration of girls to Rajkot for education. The highest girls drop out rate in the zone is reported by Girgadhda of 89.24 whilst lowest is at Rajkot city (Refer Table 3.4, Annexure)

## Epilogue

Undoubtedly, the world we live in has tremendous endemic inequality. But gender inequality is endangering gender and would be lethal terrorism with unequal opportunity for a girl child to grow and rise. When a girl child is not allow to get educated the basic requisite of economic independence and empowerment is denied. The state intervention and efforts to provide infrastructure-school is not a question here, but social, cultural and economical turn around is

inevitable. Unless, the we all put in our bit of efforts to alter this scenario equality in development will be resisted. We, also emphasis that if New education policy is grossly implemented some of the problem can be addressed as policy has equity and inclusiveness as it main objective. Some grass root innovations in rural hinterlands can also be thought of to curb drop outs. Furthermore, a mile forward by educationalist (teacher of school) can go long way to solve the problem. The sub districts where girls drops are very high (more than 70%) can be specifically targeted and tailor-made treatment may give better outcomes.
